1. Claims 1-8 are presented for examination.
2. The drawings are objected to under 37 CFR 1.83(a) because they fail to show computers (11.1, 11.2, 11.3), plugin, and databank as described in the specification. Any structural detail that is essential for a proper understanding of the disclosed invention should be shown in the drawing. MPEP § 608.02(d). A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

3. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the computer (11.1, 11.2, 11.3), plugin, and databank must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

Art Unit: 2142

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

5. Claims 1-8 are rejected under 35 U.S.C. 102(b) as being anticipated by Golan.

6. Golan (5,974,549) taught the invention as claimed including a system and method for executing a plugin which is transmitted through a network to at least one computer and that this plugin subsequently causes the at least one computer to execute the plugin (see col 4, lines 50-60.)

7. Other claimed features, e.g., monitoring taught by Golan, (see Golan, col 4, line 63.) Remote execution by plurality of computers, e.g., simultaneously are all inherent features of the Internet http protocol execution, e.g. all browser can execute simultaneously at the server is well known by everyone with any common and ordinary skill in the Internet browsing art and inherent features of the interactive browsing in the internet.

8. Riggins (6,233,341) also taught the invention as claimed at column 8, lines 35-45. This reference could be used to reject the claims but it would be a redundant rejection in view of the 102 rejection on Golan. Applicant should take a note of this.
